

I would like to suggest that the FCC consider a gradual implementation of this new technology. I believe to classify BPL as an unintentional radiator in the class of Carrier Current Systems is to deny the differences in propagation possibilities with the higher frequencies used with BPL. This could be a major interference problem that would be difficult to resolve if the interference problems did arise. I am concerned as a Amateur Radio Operator (WA0LCF) and an avid listener to shortwave radio.

Thank you for your consideration,

Peace and love,

Gjerry Berquist
